- 8 Q&A

About Evisions

- Expertise in higher education, not just software.
- Helps colleges & universities work better with powerful, easy-to-use software solutions.
- Backed by the industry's most passionate, friendly, and knowledgeable support and service teams.

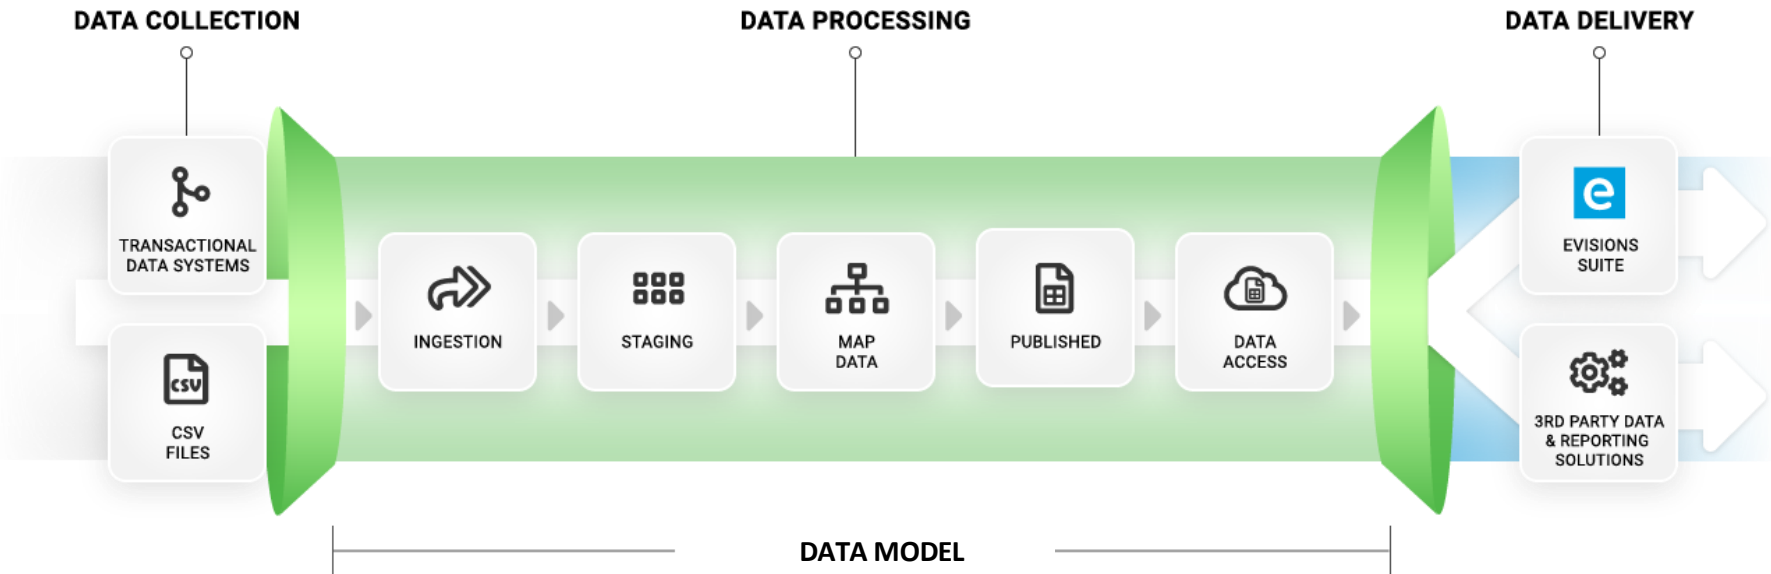

Problems & Challenges

- Disparate Data Systems
 - Within the institution
 - Within the institutional system
- Data Volumes & Quality
 - Completeness
 - Accuracy
 - Availability
 - Timeliness
- Lack of consistent longitudinal data cross the institution

What Is DORIS

- DORIS is a data platform that allows data to be collected from any data system.
- DORIS is a data lake that collects data in batches or streams from across the institution.
- DORIS is a data warehouse with a data model that serves as a centralized source of truth for reporting and institutional insight.

Overview

Benefits

A data platform that collects data from any source:

- API
- CSV uploads
- 3rd Party Databases

Easier to understand than an enterprise system:

- Data experts collect and map data without involving an IT expert.

Iterate and build faster with consistency:

- Solve smaller problem
- Quicker-time-to-value

Features

- Data Source configuration management

- Data Model Entity configuration and management
 - Raw data identification
 - Data mapping to DORIS model

- Historical Data configuration and Management
 - Raw data identification
 - Data mapping to DORIS model

Features

- Data Snapshots
 - For longitudinal insight

- Data Snapshot tagging
 - Fall census, Spring census, Pre-Fall Summer census, Post-Spring Summer Census, Full Year term End, Full Year June End

- Automation of data collection
 - Manual
 - Scheduling

DORIS Demonstration

Summary – DORIS & IRIS

A data platform that collects data from any source

Easier to understand than an enterprise system

Iterate and build faster with consistency

Reduce manual entry of targeted survey data and streamline the approval process

Manage the IPEDS approval process from start to finish with tracking and annotations

Data accuracy with built-in alerts

Questions

Thank you for your time!
